

GI Imaging	
Abdominal XR	
<b>Description</b>	<ul style="list-style-type: none"> <li>• Radiography</li> <li>• Positions: PA upright most common</li> <li>• <b>Left lateral decubitus</b> can be used for closer evaluation of peritoneal free air or to look for air trapping</li> </ul>
<b>Used to Evaluate</b>	<ul style="list-style-type: none"> <li>• Abdominal pain</li> <li>• Constipation</li> <li>• Abdominal distension</li> <li>• <b>Vomiting</b></li> <li>• Concern for <b>mass</b></li> <li>• Concern for <b>ingestion</b></li> </ul>
<b>Potential Pathology Visualized (finding)</b>	<ul style="list-style-type: none"> <li>• Ileus, bowel obstruction (dilated loops of bowel)</li> <li>• Foreign body</li> <li>• Constipation (stool burden)</li> <li>• Necrotizing enterocolitis, bowel ischemia (pneumatosis, pneumoperitoneum, air in the biliary tree)</li> <li>• Bowel perforation (free air under diaphragm)</li> </ul>
<b>Patient Prep</b>	None
Modified Barium Swallow	
<b>Description</b>	<ul style="list-style-type: none"> <li>• Videofluorography to evaluate the function of the <b>phases of swallowing</b></li> <li>• Barium impregnated foods of <b>different consistency</b> are given to the patient and swallowing function assessed indications</li> </ul>
<b>Used to Evaluate</b>	<ul style="list-style-type: none"> <li>• <b>Dysphagia</b></li> <li>• Coughing, choking, drooling with swallowing</li> <li>• <b>Aspiration PNA</b>, known or suspected</li> <li>• Neurologic or anatomic disease that may affect swallowing function</li> </ul>
<b>Potential Pathology Visualized (finding)</b>	<ul style="list-style-type: none"> <li>• Swallowing dysfunction, e.g. aspiration or laryngeal penetration</li> <li>• Anatomic anomalies (esophogram, UGI series or endoscopy may be better depending on the structural anomaly)</li> </ul>
<b>Patient Prep</b>	<ul style="list-style-type: none"> <li>• NPO for several hours (check BMC or BCH policies)</li> <li>• Patient needs to be able to cooperate with exam (needs to be able to attempt swallowing when fed)</li> </ul>
Upper GI Series (with small bowel follow through)	
<b>Description</b>	<ul style="list-style-type: none"> <li>• Single (oral) contrast study with still or fluoroscopic images</li> <li>• Double contrast (oral + gas) can help evaluate mucosal integrity</li> <li>• Esophagus (esophogram) → duodenal-jejunal junction (upper GI series)</li> </ul>
<b>Used to Evaluate</b>	<ul style="list-style-type: none"> <li>• Abdominal pain, epigastric pain/discomfort</li> <li>• Congenital syndromes associated with intestinal <b>malrotation</b></li> <li>• Weight loss or failure to thrive</li> <li>• Vomiting</li> <li>• Upper GI bleed</li> <li>• Bowel dilation in short bowel syndrome patients</li> <li>• Anastomotic stricture or abnormality in post-surgical short bowel syndrome patients</li> </ul>
<b>Potential Pathology Visualized (finding)</b>	<ul style="list-style-type: none"> <li>• Malrotation</li> <li>• Hiatal hernia</li> <li>• Gastritis, duodenitis, peptic ulcer disease</li> <li>• Duodenal laceration or intramural hematoma</li> <li>• Pyloric stenosis (though ultrasound is preferred)</li> <li>• Bowel dilatation post-surgery</li> <li>• Anastomotic abnormality</li> </ul>
<b>Patient Prep</b>	<ul style="list-style-type: none"> <li>• NPO for at least two hours</li> <li>• Must be able to swallow contrast</li> <li>• Contrast may be placed through an enteral tube if small bowel follow through is desired</li> </ul>

GI Imaging	
Abdominal Ultrasound (with doppler)	
<b>Description</b>	U/S evaluation of liver, gallbladder, spleen, pancreas, kidneys, and IVC/aorta
<b>Used to Evaluate</b>	<ul style="list-style-type: none"> <li>• Abdominal trauma --&gt; FAST exam evaluates for abdominal fluid/blood</li> <li>• Abdominal pain</li> <li>• Splenomegaly or reversal of portal flow in patients on chronic parenteral nutrition as a surrogate marker or portal hypertension</li> </ul>
<b>Potential Pathology Visualized (finding)</b>	<ul style="list-style-type: none"> <li>• <b>Intussuscep.</b></li> <li>• <b>Pyloric stenosis</b></li> <li>• <b>Appendicitis</b></li> <li>• Suspicion for abdominal mass</li> <li>• Liver/gall bladder pathology</li> <li>• Pancreatitis</li> <li>• Nephrolithiasis</li> <li>• Ovarian cyst, torsion, ectopic pregnancy</li> </ul>
<b>Patient Prep</b>	<ul style="list-style-type: none"> <li>• None</li> <li>• NPO for 6 hours (if looking for gallstones)</li> </ul>
Abdominal CT	
<b>Description</b>	<ul style="list-style-type: none"> <li>• Cross sectional imaging of abdominal structures</li> <li>• Both IV and oral contrast can be used</li> </ul>
<b>Used to Evaluate</b>	<ul style="list-style-type: none"> <li>• Colicky pain</li> <li>• Abd trauma (once stable)</li> <li>• c/f cancer, liver dz</li> <li>• Features of SI Crohn's disease (fistula, stricture, abscess)</li> </ul>
<b>Potential Pathology Visualized (finding)</b>	<ul style="list-style-type: none"> <li>• Nephrolithiasis, <b>urinary tract calculi (non-con)</b></li> <li>• Pelvic or abdominal masses (contrast)</li> <li>• Inflammatory bowel disease</li> <li>• SBO/LBO</li> <li>• Diffuse liver disease (steatosis, iron deposition disease, cirrhosis)</li> <li>• Appendicitis</li> <li>• Abdominal trauma</li> </ul>
<b>Patient Prep</b>	Oral or IV contrast as indicated
Contrast Enema	
<b>Description</b>	<ul style="list-style-type: none"> <li>• Contrast agent per rectum</li> <li>• <b>Water-soluble</b> (gastrograffin) if <b>bowel perforation</b> suspected</li> <li>• <b>Air</b> if <b>intussusception</b> suspected</li> </ul>
<b>Used to Evaluate</b>	<ul style="list-style-type: none"> <li>• Inflammatory bowel disease</li> <li>• c/f obstruction</li> <li>• Anastomotic stricture or abnormality in post-surgical short bowel syndrome patients</li> </ul>
<b>Potential Pathology Visualized (finding)</b>	<ul style="list-style-type: none"> <li>• Lower abdominal obstruction in the neonate (Hirschsprung's disease, meconium ileus, ileal atresia)</li> <li>• Intussusception (diagnostic and therapeutic)</li> <li>• Anastomotic abnormality</li> </ul>
<b>Patient Prep</b>	None
